# Introduction

## 1.1 Copyright Notice

All Rights Reserved.

The information in this document is subject to change without prior notice in order to improve the reliability, design and function. It does not represent a commitment on the part of the manufacturer.

Under no circumstances will the manufacturer be liable for any direct, indirect, special, incidental, or consequential damages arising from the use or inability to use the product or documentation, even if advised of the possibility of such damages.

This document contains proprietary information protected by copyright. All rights are reserved. No part of this manual may be reproduced by any mechanical, electronic, or other means in any form without prior written permission of the manufacturer.

## 1.2 Declaration of Conformity

### CE

The CE symbol on your product indicates that it is in compliance with the directives of the Union European (EU). A Certificate of Compliance is available by contacting Technical Support.

This product has passed the CE test for environmental specifications when shielded cables are used for external wiring. We recommend the use of shielded cables. This kind of cable is available from ARBOR. Please contact your local supplier for ordering information.

This product has passed the CE test for environmental specifications. Test conditions for passing included the equipment being operated within an industrial enclosure. In order to protect the product from being damaged by ESD (Electrostatic Discharge) and EMI leakage, we strongly recommend the use of CE-compliant industrial enclosure products.

#### Warning

This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

### FCC Class A

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) This device must accept any interference received, including interference that may cause undesired operation.

**NOTE:**

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**RoHS**

ARBOR Technology Corp. certifies that all components in its products are in compliance and conform to the European Union's Restriction of Use of Hazardous Substances in Electrical and Electronic Equipment (RoHS) Directive 2002/95/EC.

The above mentioned directive was published on 2/13/2003. The main purpose of the directive is to prohibit the use of lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE) in electrical and electronic products. Member states of the EU are to enforce by 7/1/2006.

ARBOR Technology Corp. hereby states that the listed products do not contain unintentional additions of lead, mercury, hex chrome, PBB or PBDB that exceed a maximum concentration value of 0.1% by weight or for cadmium exceed 0.01% by weight, per homogenous material. Homogenous material is defined as a substance or mixture of substances with uniform composition (such as solders, resins, plating, etc.). Lead-free solder is used for all terminations (Sn(96-96.5%), Ag(3.0-3.5%) and Cu(0.5%)).

**SVHC / REACH**

To minimize the environmental impact and take more responsibility to the earth we live, Arbor hereby confirms all products comply with the restriction of SVHC (Substances of Very High Concern) in (EC) 1907/2006 (REACH --Registration, Evaluation, Authorization, and Restriction of Chemicals) regulated by the European Union.

All substances listed in SVHC < 0.1 % by weight (1000 ppm)

### **1.3 About This User's Manual**

This user's manual provides general information and installation instructions about the product. This User's Manual is intended for experienced users and integrators with hardware knowledge of personal computers. If you are not sure about any description in this booklet, please consult your vendor before further handling.

### **1.4 Warning**

Single Board Computers and their components contain very delicate Integrated Circuits (IC). To protect the Single Board Computer and its components against damage from static electricity, you should always follow the following precautions when handling it :

1. Disconnect your Single Board Computer from the power source when you want to work on the inside.
2. Hold the board by the edges and try not to touch the IC chips, leads or circuitry.
3. Use a grounded wrist strap when handling computer components.
4. Place components on a grounded antistatic pad or on the bag that comes with the Single Board Computer, whenever components are separated from the system.

### **1.5 Replacing the Lithium Battery**

Incorrect replacement of the lithium battery may lead to a risk of explosion.

The lithium battery must be replaced with an identical battery or a battery type recommended by the manufacturer.

Do not throw lithium batteries into the trash-can. It must be disposed of in accordance with local regulations concerning special waste.

### **1.6 Technical Support**

If you have any technical difficulties, please do not hesitate to call or e-mail our customer service.

<http://www.arbor.com.tw>

E-mail: [info@arbor.com.tw](mailto:info@arbor.com.tw)

## 1.7 Warranty

This product is warranted to be in good working order for a period of two years from the date of purchase. Should this product fail to be in good working order at any time during this period, we will, at our option, replace or repair it at no additional charge except as set forth in the following terms. This warranty does not apply to products damaged by misuse, modifications, accident or disaster.

Vendor assumes no liability for any damages, lost profits, lost savings or any other incidental or consequential damage resulting from the use, misuse of, or inability to use this product. Vendor will not be liable for any claim made by any other related party.

Vendors disclaim all other warranties, either expressed or implied, including but not limited to implied warranties of merchantability and fitness for a particular purpose, with respect to the hardware, the accompanying product's manual(s) and written materials, and any accompanying hardware. This limited warranty gives you specific legal rights.

Return authorization must be obtained from the vendor before returned merchandise will be accepted. Authorization can be obtained by calling or faxing the vendor and requesting a Return Merchandise Authorization (RMA) number. Returned goods should always be accompanied by a clear problem description.

## 1.8 Packing List

### Packing List

Before you begin installing your single board, please make sure that the following materials have been shipped:

1 x COM Express CPU Module

1 x Driver CD

1 x Quick Installation Guide

If any of the above items is damaged or missing, contact your vendor immediately.

## 1.9 Ordering Information

EmETXe-i2503-N26	Intel® Atom™ N2600 1.6GHz COM Express Compact CPU module
EmETXe-i2503-D25	Intel® Atom™ D2550 1.86GHz COM Express Compact CPU module
HS-2503-F1	Heat spreader (95 x 95 x18mm)
HS-2503-W1	Heatsink wave type (95 x 95 x 40mm)
PBE-1700-F R1.3	COM Express Type 2 evaluation board in ATX form factor w/ F71869 Super IO
CBK-04-1700-00	Cable kit 1 x SATA cable 1 x COM port cable 1 x FDD cable 1 x IDE cable

## 1.10 Specifications

Form Factor	COM Express Type 2 CPU Module
CPU	Soldered onboard Intel® Atom™ N2600 1.6GHz or D2550 1.86GHz processor
Chipset	Intel® PCH NM10
System Memory	1 x DDR3 SO-DIMM socket, supporting 1066MHz SDRAM up to 4GB (D2550)/ 2GB (N2600)
Graphics	<ul style="list-style-type: none"> <li>● Integrated Intel® GMA 3650 (Gfx frequency 640MHz) for D2550 processor</li> <li>● Integrated Intel® GMA 3600 (Gfx frequency 400MHz) for N2600 processor</li> </ul>
Display	<ul style="list-style-type: none"> <li>● Support Analog RGB</li> <li>● LCD: Single Channel 18-bit for N2600 processor/ 24-bit for D2550 processor</li> <li>● Support dual independent displays</li> </ul>
Ethernet controller	1 x Intel® 82583V PCIe Gigabit Ethernet controller
BIOS	AMI® UEFI BIOS
Storage	2 x Serial ATA ports with 300MB/s HDD transfer rate
Digital I/O	8-bit programmable Digital Input/Output
Universal Serial Bus	8 x USB 2.0 ports
Expansion Interface	<ul style="list-style-type: none"> <li>● 2 x PCIe1 lanes</li> <li>● 4 x PCI masters</li> <li>● SPI and LPC (Low Pin Count) interfaces</li> </ul>
Operating Temp.	-20°C ~ 70°C (-4°F ~ 158°F)
Operating Humidity	0 ~ 95% (non-condensing)
Watchdog Timer	1~ 255 levels reset
Dimension (L x W)	95 x 95 mm (3.7" x 3.7")

### 1.11 Board Dimensions

# Chapter 2

# Installation

## 2.1 What is “COM Express”?

With more and more demands on small and embedded industrial boards, a multi-functioned COM (Computer-on-Module) is the great one of the solutions.

COM Express, board-to-board connectors consist of two rows of 220 pins each.

Row AB, which is required, provides pins for PCI Express, SATA, LVDS, LCD channel, LPC bus, system and power management, VGA, LAN, and power and ground interfaces.

Row CD, which is optional, provides SDVO and legacy PCI and IDE signals next to additional PCI Express, LAN and power and ground signals.

By the way, the target markets of COM will be focused on:

- Retail & Advertising
- Medical
- Test & Measurement
- Gaming & Entertainment
- Industrial & Automation
- Military & Government
- Security

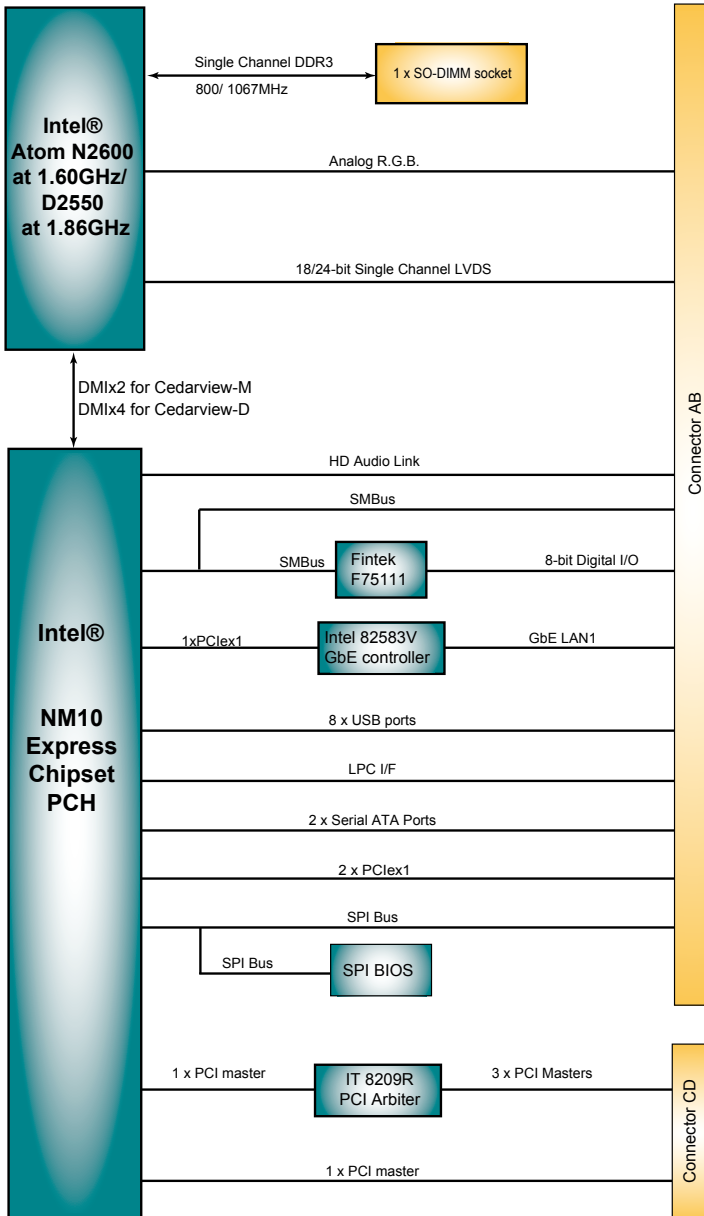

COM Express supports seven pin-out Type applying to Basic and Extended form factors:

Module Type 1 and 10 support single connector with two rows of pins (220 pins) Module Type 2, 3, 4, 5 and 6 support two connectors with four rows of pins (440 pins) Connector placement and most mounting holes have transparency between Form Factors.

The differences among the Module Type 2 and EmETXe-i2503 are summarized in table below:

<b>Module Type</b>	<b>Standard Type 2</b>	<b>EmETXe-i2503</b>
<b>Connectors</b>	2	2
<b>Connector Rows</b>	A, B, C, D	A, B, C, D
<b>PCIe Lanes (Max)</b>	22	2
<b>PEG (Max)</b>	Yes	No
<b>PCI Bus</b>	Yes	Yes
<b>PATA - IDE</b>	Yes	No
<b>Serial ATA (Max)</b>	4	2
<b>LAN (Max)</b>	1	1
<b>Serial Ports</b>	No	No
<b>Muxed SDVO (Max)</b>	2	0

# Chapter 3

# BIOS

### 3.1 BIOS Main Setup

The AMI BIOS provides a setup utility program for specifying the system configurations and settings which are stored in the BIOS ROM of the system. When you turn on the computer, the AMI BIOS is immediately activated. After you have entered the setup utility, use the left/right arrow keys to highlight a particular configuration screen from the top menu bar or use the down arrow key to access and configure the information below.

NOTE: In order to increase system stability and performance, our engineering staff are constantly improving the BIOS menu. The BIOS setup screens and descriptions illustrated in this manual are for your reference only, and may not completely match what you see on your screen.

### BIOS Information

Display the BIOS information.

## System Date

Set the system date. Note that the 'Day' automatically changes when you set the date.

The date format is:

- Day** : Sun to Sat
- Month** : 1 to 12
- Date** : 1 to 31
- Year** : 1999 to 2099

## System Time

Set the system time.

The time format is:

- Hour** : 00 to 23
- Minute** : 00 to 59
- Second** : 00 to 59

## 3.2 Advanced Settings

### Legacy OpROM Support

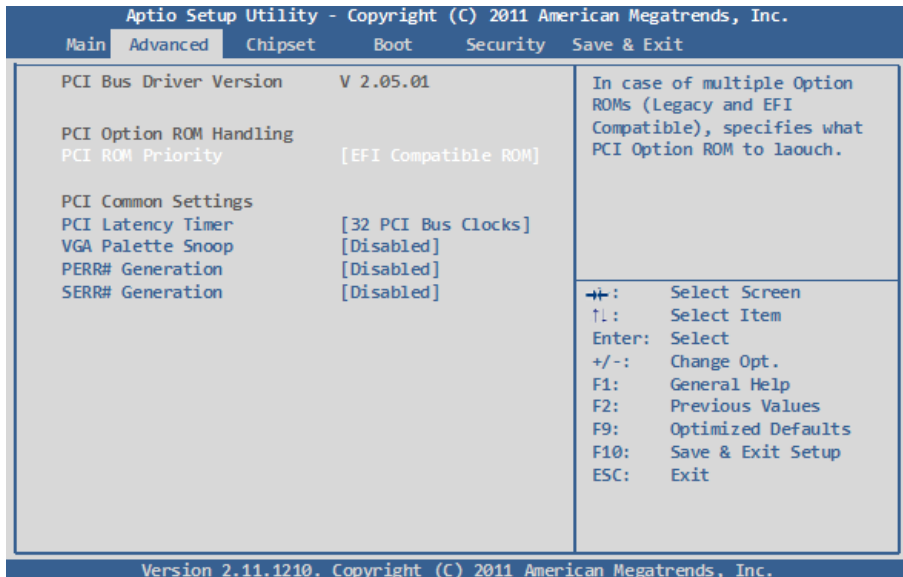

#### Launch PXE OpROM

Enable or disable the boot option for legacy network devices.

#### Launch Storage OpROM

Enable or Disable Boot Option for Legacy Mass Storage Devices with Option ROM.

### 3.2.1 PCI Subsystem Settings

#### PCI ROM Priority

In case of multiple Option ROMs (Legacy and EFI Compatible), specifies what PCI Option ROM to launch.

#### PCI Latency Timer

Value to be programmed into PCI Latency Timer Register.

#### VGA Palette Snoop

Enables or Disabled VGA Palette Registers Snooping.

#### PERR# Generation

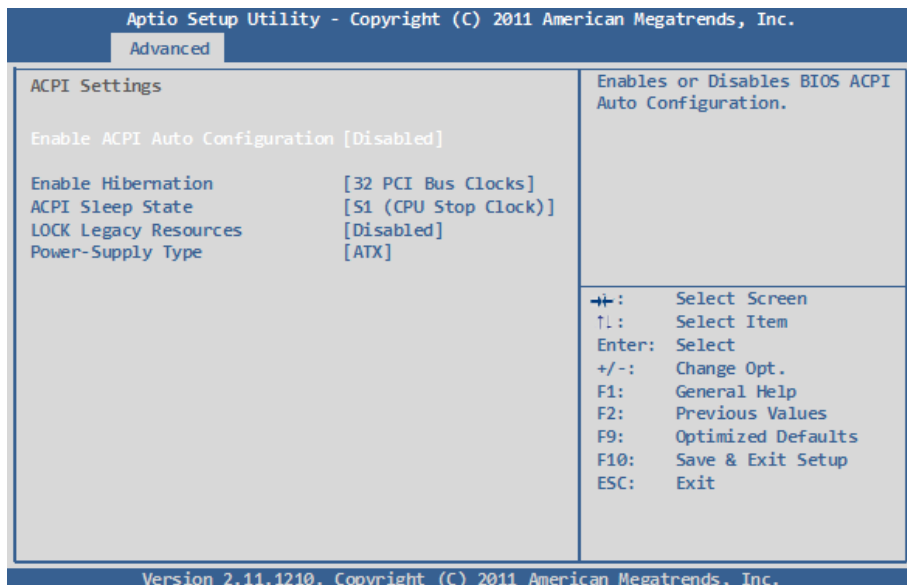

Enables or Disabled PCI Device to Generate PERR#.

#### SERR# Generation

Enables or Disabled PCI Device to Generate SERR#.

## 3.2.2 ACPI Settings

### Enable ACPI Auto Configuration

Enables or disables BIOS ACPI Auto Configuration.

### Enable Hibernation

Enable or disable System ability to Hibernation (OS/S4 Sleep State). This option may be not effective with some OS.

### ACPI Sleep State

Select the highest ACPI sleep state the system will enter when the SUSPEND button is pressed.

The choice: Suspend Disabled, S1 (CPU Stop Clock), S3 (Suspend to RAM)

### Lock Legacy Resources

Enables or disables Lock of Legacy Resources.

### Power-Supply Type

Set power-supply type.

The choice: AT, ATX

### 3.2.3 CPU Configuration

The CPU Configuration setup screen varies depending on the installed processor.

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.		
Advanced		
CPU Configuration		Enabled for Windows XP and Linux (OS optimized for Hyper-Threading Technology) and Disabled for other OS (OS not optimized for Hyper-Threading Technology).
Processor Type	Intel(R) Atom(TM) CPU EMT64 Supported	
Processro Speed	1865 MHz	→+: Select Screen ↑.: Select Item Enter: Select +/-: Change Opt. F1: General Help F2: Previous Values F9: Optimized Defaults F10: Save & Exit Setup ESC: Exit
System Bus Speed	533 MHz	
Ratio Status	14	
Actual Ratio	14	
System Bus Speed	533 MHz	
Processor Stepping	30611	
Microcode Revision	269	
L1 Cache RAM	2x56 k	
L2 Cache RAM	2x512 k	
Processro Core	Dual	
Hyper-Threading	Supported	
Hyper-Threading	[Enabled]	
Execute Disable Bit	[Enabled]	
Limit CPUID Maximum	[Disabled]	
Version 2.11.1210. Copyright (C) 2011 American Megatrends, Inc.		

#### Hyper-threading

This item is used to enable or disable the processor’s Hyper-threading feature.

Enabled for Windows XP and Linux (OS optimized for Hyper-threading Technology) and disabled for other OS (OS not optimized for Hyper-threading Technology).

When disabled, only one thread per enabled core is enabled.

#### Execute Disable Bit

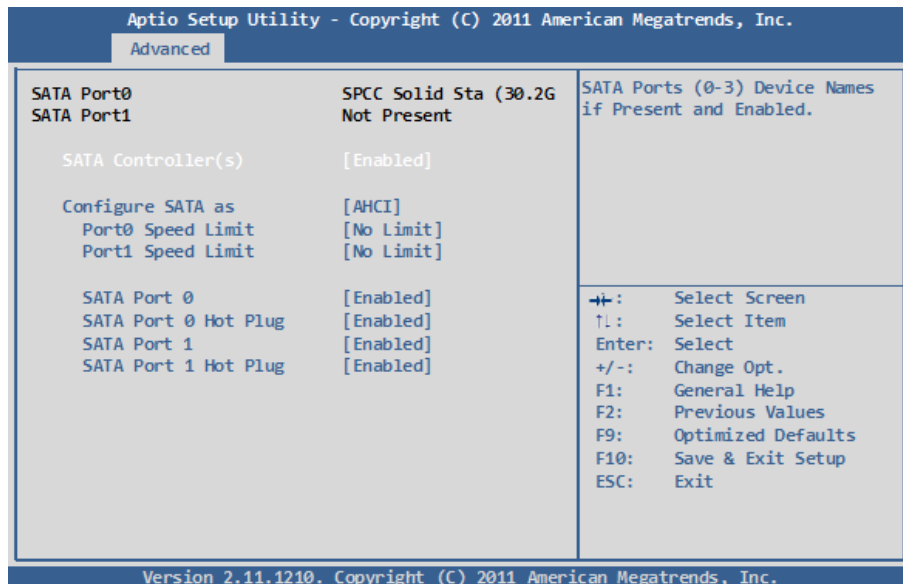

XD can prevent certain classes of malicious buffer overflow attacks when combined with a supporting OS (Windows Server 2003 SP1, Windows XP SP2, SuSE Linux 9.2, RedHat Enterprise 3, update 3.)

#### Limit CPUID Maximum

Disabled for Windows XP.

## 3.2.4 IDE Configuration

It allows you to select the operation mode for SATA controller.

### SATA Controller(s)

Enable or disable SATA devices.

### SATA Mode Selection

The choice: Disable; IDE (Default), AHCI (not available in EmETXe-i65M2), RAID

IDE: Set the Serial ATA drives as Parallel ATA storage devices.

AHCI: Allow the Serial ATA devices to use AHCI (Advanced Host Controller Interface).

RAID: Create RAID or Intel Matrix Storage configuration on Serial ATA devices.

### 3.2.5 USB Configuration

#### Legacy USB Support

Enable support for legacy USB. AUTO option disables legacy support if no USB devices are connected.

The choice: Enabled (Default); Auto; Disabled

#### EHCI Hand-off

Allow you to enable support for operating systems without an EHCI hand-off feature. Do not disable the BIOS EHCI Hand-Off option if you are running a Windows® operating system with USB device.

The choice: Enabled (Default); Disabled

#### USB transfer time-out

The time-out value for Control, Bulk, and Interrupt transfers. Default setting: 20 sec

#### Device reset time-out

USB mass storage device Start Unit command time-out. Default setting: 20 sec

---

## Device power-up delay

Maximum time the device will take before it properly reports itself to the host controller. 'Auto' uses default value: for a Root port it is 100ms, for a Hub port the delay is taken from hub descriptor. The choice: Auto (Default); Manual

### 3.2.6 Super IO Configuration

You can use this item to set up or change the Super IO configuration for parallel ports and serial ports.

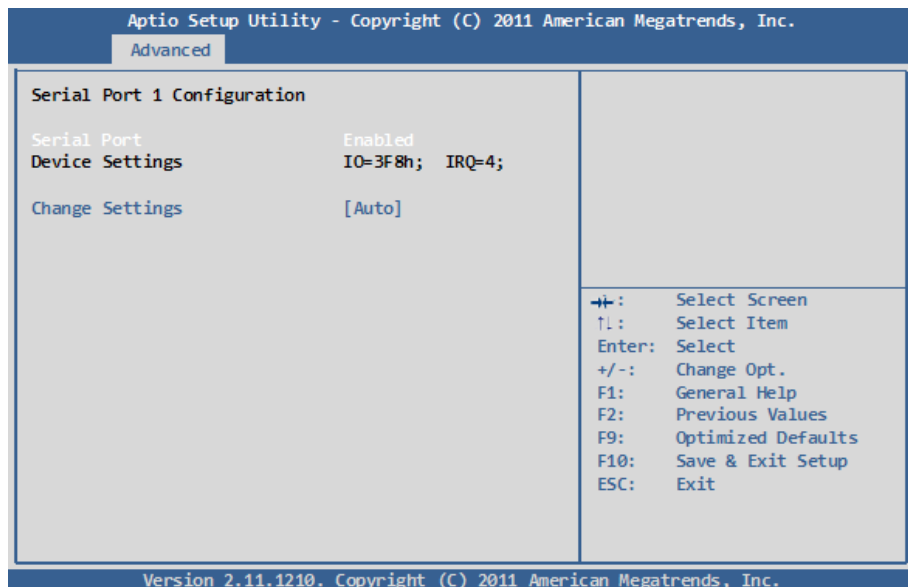

#### Power On After Power Failure

Specify what state to go to when power is re-applied after a power failure.

#### Power On by modem Function

Enables or Disables the Power On by modem function.

## Serial Port 1~2 Configuration

### Serial Port

Use the Serial port option to enable or disable the serial port.

The choice: Enabled, Disabled

### Change Settings

Use the Change Settings option to change the serial port's IO port address and interrupt address.

The choice:

Auto

IO=3F8h; IRQ=4,

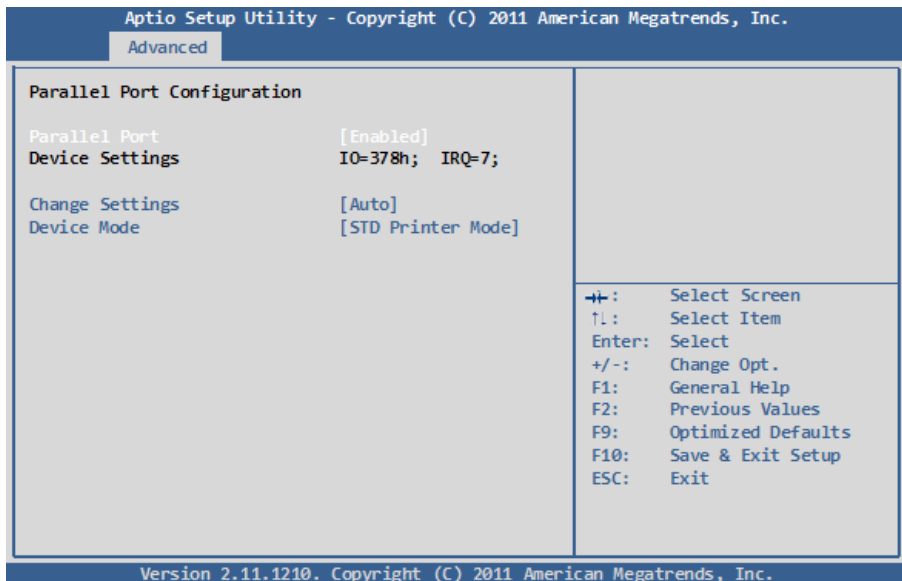

IO=3F8h; IRQ=3,4,5,6,7,10,11,12

IO=2F8h; IRQ=3,4,5,6,7,10,11,12

IO=3E8h; IRQ=3,4,5,6,7,10,11,12

IO=2E8h; IRQ=3,4,5,6,7,10,11,12

## Parallel Port Configuration

## Parallel Port Configuration

This item allows you to enable/disable Parallel Port (LPT/LPTE).

### Change Settings

Use the Change Settings option to change the parallel port's IO port address and interrupt address.

The choice:

Auto

IO=378h; IRQ=5,

IO=378h; IRO=5,6,7,10,11,12,

IO=378h; IRQ=5,6,7,10,11,12,

IO=278h; IRQ=5,6,7,10,11,12,

IO=38Ch; IRQ=5,6,7,10,11,12,

### Device Mode

The choice: Standard Parallel Port Mode, EPP Mode, ECP Mode, EPP Mode & ECP Mode.

### 3.2.7 F71869 H/W Monitor

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.

Advanced

PC Health Status

#### PC Health Status

The hardware monitor menu shows the operating temperature and system voltages of CPU module.

### 3.3 Chipset

This section allows you to configure and improve your system; also, set up some system features according to your preference.

### 3.3.1 Host Bridge Parameters

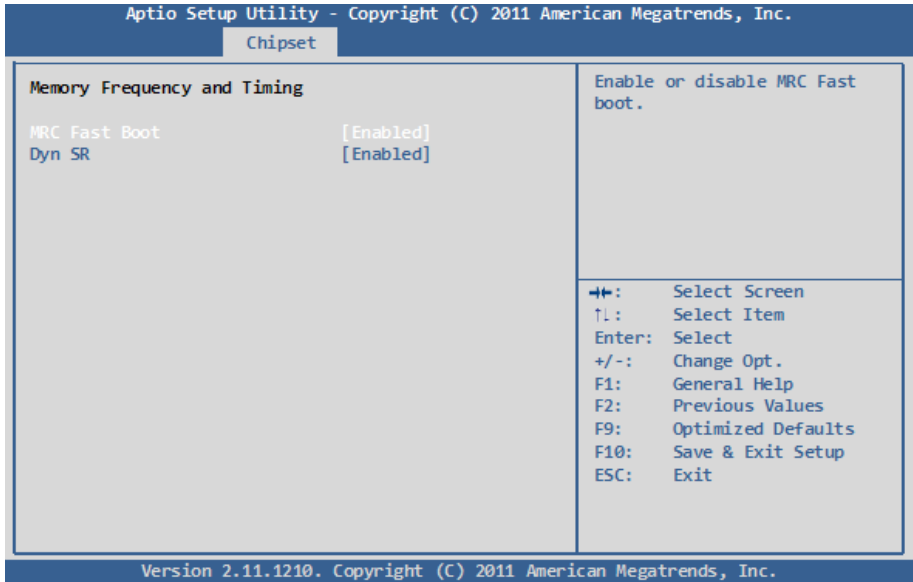

#### Memory Frequency and Timing

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.

Chipset

<ul style="list-style-type: none"> <li>▶ Memory Frequency and Timing</li> <li>▶ Intel IGD Configuration</li> </ul> <p>***** Memory Information *****</p> <p>Memory Frequency           1067 MHz (DDR3)</p> <p>Total Memory               2048 MB</p> <p>DIMM0                        Not Present</p> <p>DIMM1                        2048 MB</p>	<p>Config Memory Frequency and Timing Settings.</p>
	<p>←→:    Select Screen</p> <p>↑↓:    Select Item</p> <p>Enter: Select</p> <p>+/-:   Change Opt.</p> <p>F1:    General Help</p> <p>F2:    Previous Values</p> <p>F9:    Optimized Defaults</p> <p>F10:   Save &amp; Exit Setup</p> <p>ESC:   Exit</p>

**MRC Fast Boot**

Enable or disable MRC fast boot.

**Dyn SR**

Enable or disable Dyn SR.

## Intel IGD Configuration

### Auto Disable IGD

Auto disable IGD upon external GFX detected.

### IGFX - Boot Type

Select the Video Device which will be activated during POST. This has no effect if external graphics present.

### LCD Panel Type

Select LCD panel used by Internal Graphics Device by selecting the appropriate setup item: VBIOS Default, 640x480 LVDS ~ 2048x1536 LVDS.

### Panel Scaling

Select the LCD panel scaling option used by the Internal Graphics Device: Auto, Off, Force Scaling.

### Backlight Control

The choice: PWM Inverted (Default), PWM Normal, GMBus Inverted and GMBus Normal.

### **ISD Clock Source**

ISD clock selection.

### **Fixed Graphics Memory Size**

Configure fixed Graphics memory size.

### **ALS Support**

The choice: Enabled, Disabled.

### **Backlight Control Support**

Backlight control configuration.

### **BIA**

The choice: VBIOS Default, Disabled and Level 1/2/3/4/5.

### 3.3.2 SB Configuration

#### DMI Link ASPM Control

The control of Active State Power Management on both NB side and SB side of the DMI Link.

#### PCI-Exp. High Priority port

Enables or Disables PCI-Exp. High Priority port.

#### PCIE Card0/1

Enables or Disables PCIE Card0/1.

#### High Precision Timer

Enables or Disables High Precision Timer.

#### SLP\_S4 Assertion Width

Select a minimum assertion width of the SLP\_S4# signal.  
The choice: 1-2 Seconds, 2-3 Seconds, 3-4 Seconds, 4-5 Seconds

#### SPI ROM Control

Enables or Disables SPI ROM Control.

### **Select USB Mode**

Select USB mode to control USB port.

### **UHCI1~4**

Control the USB UHCI (USB 1.1) functions. Disable from highest to lowest controller.

### **USB 2.0 (EHCI) Support**

Enable or Disable USB 2.0 (EHCI).

### **LAN controller**

Enable or Disable OnChip NIC Controller.

### **SMBus controller**

Enable or Disable SMBus controller.

### **SIRQ Logic**

Enable or Disable SIRQ logic.

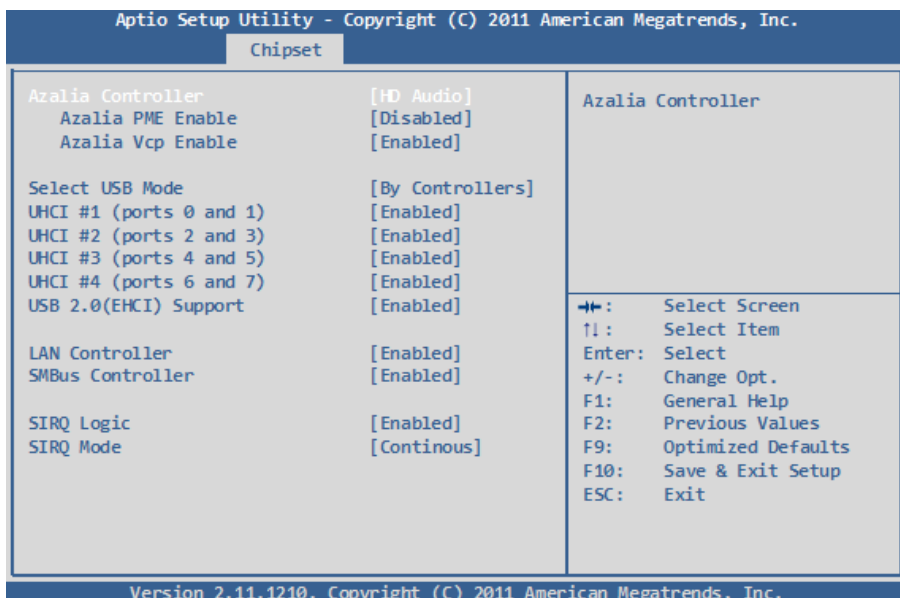

### **SIRQ Mode**

SIRQ Mode selection.

## TPT Devised

Enable/ Disable Intel(R) IO Controller Hub (TPT) devices.

### Azalia Controller

Control detection of the Azalia device.

Disabled = Azalia will be unconditionally disabled.

AH Audio = Azalia will be enabled if present, disabled otherwise.

### Azalia PME Enable

Enable or Disable Power Management capability of Audio Controller.

### Azalia Vcp Enable

Azalia supports 1 external VC, which, when enabled, overrides ICH VCp settings.

## PCI Express Root Port 0~5

Aptio Setup Utility - Copyright (C) 2011 American Megatrends, Inc.

Chipset

PCI Express Port 0	[Enabled]	Enable/ Disable PCI Express Root Port 0.
Port 0 IDxAPIO	[Disabled]	
Automatic ASPM	[Manual]	<b>←→</b> : Select Screen <b>↑↓</b> : Select Item <b>Enter</b> : Select <b>+/-</b> : Change Opt. <b>F1</b> : General Help <b>F2</b> : Previous Values <b>F9</b> : Optimized Defaults <b>F10</b> : Save & Exit Setup <b>ESC</b> : Exit
ASPM L0S	[Disabled]	
ASPM L1	[Disabled]	
URR	[Disabled]	
FER	[Disabled]	
NFER	[Disabled]	
CER	[Disabled]	
CTO	[Disabled]	
SEFE	[Disabled]	
SENF	[Disabled]	
SECE	[Disabled]	
PME SCI	[Enabled]	
Hot Plug	[Disabled]	

Version 2.11.1210. Copyright (C) 2011 American Megatrends, Inc.

## PCI Express Root Port 0~5

Control the PCI Express Root Port.

### ASPM Support

Set the ASPM Level to Disabled, L0s, L1, L0sL1, Auto

Force L0 - Force all links to L0 State

AUTO - BIOS auto configuration

DISABLE - Disable ASPM

**URR**

Enable or disable PCI Express Unsupported Request Reporting.

**FER**

Enable or disable PCI Express Device Fatal Error Reporting.

**NFER**

Enable or disable PCI Express Device Non-Fatal Error Reporting.

**CER**

Enable or disable PCI Express Device Correctable Error Reporting.

**CTO**

Enable or disable PCI Express Completion Timer TO.

**SEFE**

Enable or disable Root PCI Express System Error on Fatal Error.

**SENF**

Enable or disable Root PCI Express System Error on Non-Fatal Error.

**SECE**

Enable or disable Root PCI Express System Error on Correctable Error.

**PME SCI**

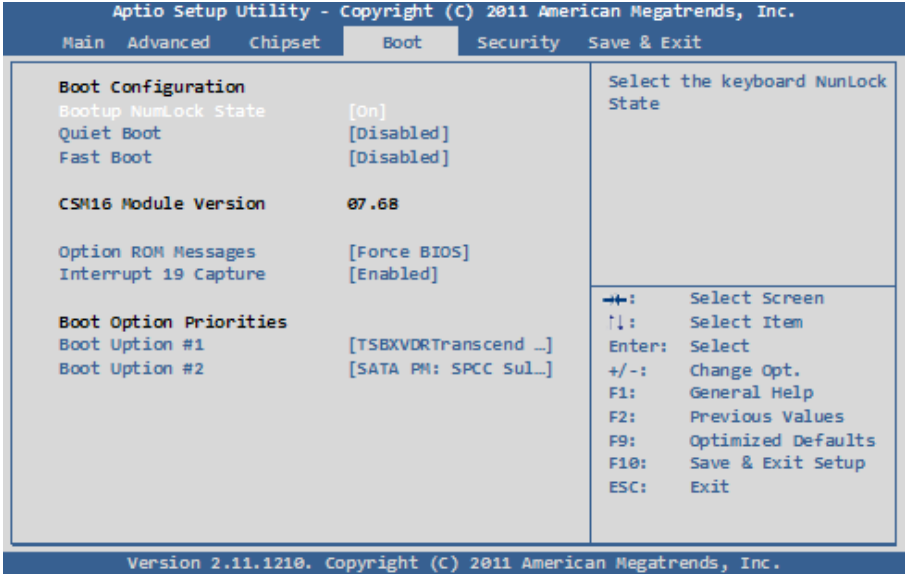

Enable or disable PCI Express PME SCI.

**Hot Plug**

Enable or disable PCI Express Hot Plug.

### 3.4 Boot Settings

The Boot menu items allow you to change the system boot options.

#### Boot Configuration

##### Bootup NumLock State

This setting determines whether the Num Lock key should be activated at boot up.

##### Quiet Boot

This allows you to select the screen display when the system boots.

##### Fast Boot

Enables or disables boot with initialization of a minimal set of devices required to launch active boot option. Has no effect for BBS boot option.

##### Option ROM Messages

Set display mode for Option ROM.

##### Interrupt 19 Capture

Enabled: Allows option ROM to trap Int 19.

##### Boot Option Priorities

Select the boot sequence of the hard drives.

## 3.5 Security

### Administrator Password

Use the Administrator Password to set or change a administrator password.

#### ENTER PASSWORD

Type the password, up to eight characters in length, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <ESC> to abort the selection and not enter a password.

To disable a password, just press <Enter> when you are prompted to enter the password. A message will confirm the password will be disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

#### PASSWORD DISABLED

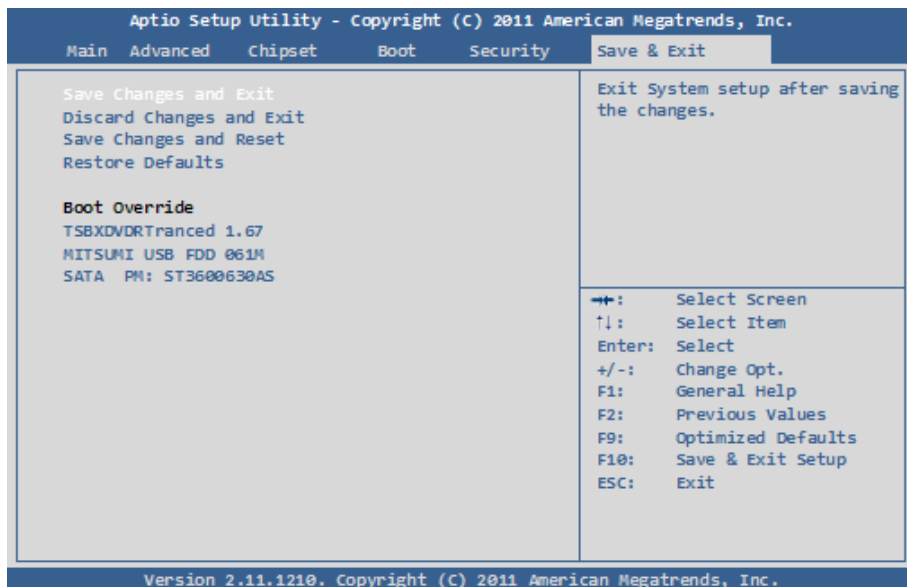

When a password has been enabled, you will be prompted to enter it every time you try to enter Setup. This prevents an unauthorized person from

changing any part of your system configuration.

Additionally, when a password is enabled, you can also require the BIOS to request a password every time your system is rebooted. This would prevent unauthorized use of your computer.

You can determine when the password is required within the BIOS Features Setup Menu and its Security option. If the Security option is set to “System”, the password will be required both at boot and at entry to Setup. If it’s set to “Setup”, prompting only occurs when trying to enter Setup.

## 3.6 Save & Exit

### Save Changes and Reset

Pressing <Enter> on this item and it asks for confirmation:

Save configuration changes and exit setup?

Pressing <OK> stores the selection made in the menus in CMOS - a special section of memory that stays on after you turn your system off. The next time you boot your computer, the BIOS configures your system according to the Setup selections stored in CMOS. After saving the values the system is restarted again.

### Restore Defaults

Restore system to factory default.

Pressing <Enter> on this item and it asks for confirmation prior to executing this command.

### Boot Override

This group of functions includes a list of tokens, each of them corresponding to one device within the boot order. Select a drive to immediately boot that device regardless of the current boot order.

## 3.7 AMI BIOS Checkpoints

### 3.7.1 Checkpoint Ranges

Status Code Range	Description
0x01 – 0x0B	SEC execution
0x0C – 0x0F	SEC errors
0x10 – 0x2F	PEI execution up to and including memory detection
0x30 – 0x4F	PEI execution after memory detection
0x50 – 0x5F	PEI errors
0x60 – 0x8F	DXE execution up to BDS
0x90 – 0xCF	BDS execution
0xD0 – 0xDF	DXE errors
0xE0 – 0xE8	S3 Resume (PEI)
0xE9 – 0xEF	S3 Resume errors (PEI)
0xF0 – 0xF8	Recovery (PEI)
0xF9 – 0xFF	Recovery errors (PEI)

## 3.7.2 Standard Checkpoints

### SEC Phase

Status Code	Description
0x00	Not used
<b>Progress Codes</b>	
0x01	Power on. Reset type detection (soft/hard).
0x02	AP initialization before microcode loading
0x03	North Bridge initialization before microcode loading
0x04	South Bridge initialization before microcode loading
0x05	OEM initialization before microcode loading
0x06	Microcode loading
0x07	AP initialization after microcode loading
0x08	North Bridge initialization after microcode loading
0x09	South Bridge initialization after microcode loading
0x0A	OEM initialization after microcode loading
0x0B	Cache initialization
<b>SEC Error Codes</b>	
0x0C – 0x0D	Reserved for future AMI SEC error codes
0x0E	Microcode not found
0x0F	Microcode not loaded

**PEI Phase**

Status Code	Description
<b>Progress Codes</b>	
0x10	PEI Core is started
0x11	Pre-memory CPU initialization is started
0x12	Pre-memory CPU initialization (CPU module specific)
0x13	Pre-memory CPU initialization (CPU module specific)
0x14	Pre-memory CPU initialization (CPU module specific)
0x15	Pre-memory North Bridge initialization is started
0x16	Pre-Memory North Bridge initialization (North Bridge module specific)
0x17	Pre-Memory North Bridge initialization (North Bridge module specific)
0x18	Pre-Memory North Bridge initialization (North Bridge module specific)
0x19	Pre-memory South Bridge initialization is started
0x1A	Pre-memory South Bridge initialization (South Bridge module specific)
0x1B	Pre-memory South Bridge initialization (South Bridge module specific)
0x1C	Pre-memory South Bridge initialization (South Bridge module specific)
0x1D – 0x2A	OEM pre-memory initialization codes
0x2B	Memory initialization. Serial Presence Detect (SPD) data reading
0x2C	Memory initialization. Memory presence detection
0x2D	Memory initialization. Programming memory timing information
0x2E	Memory initialization. Configuring memory
0x2F	Memory initialization (other).
0x30	Reserved for ASL (see ASL Status Codes section below)
0x31	Memory Installed

0x32	CPU post-memory initialization is started
0x33	CPU post-memory initialization. Cache initialization
0x34	CPU post-memory initialization. Application Processor(s) (AP) initialization
0x35	CPU post-memory initialization. Boot Strap Processor (BSP) selection
0x36	CPU post-memory initialization. System Management Mode (SMM) initialization
0x37	Post-Memory North Bridge initialization is started
0x38	Post-Memory North Bridge initialization (North Bridge module specific)
0x39	Post-Memory North Bridge initialization (North Bridge module specific)
0x3A	Post-Memory North Bridge initialization (North Bridge module specific)
0x3B	Post-Memory South Bridge initialization is started
0x3C	Post-Memory South Bridge initialization (South Bridge module specific)
0x3D	Post-Memory South Bridge initialization (South Bridge module specific)
0x3E	Post-Memory South Bridge initialization (South Bridge module specific)
0x3F-0x4E	OEM post memory initialization codes
0x4F	DXE IPL is started

### **PEI Error Codes**

0x50	Memory initialization error. Invalid memory type or incompatible memory speed
0x51	Memory initialization error. SPD reading has failed
0x52	Memory initialization error. Invalid memory size or memory modules do not match.
0x53	Memory initialization error. No usable memory detected
0x54	Unspecified memory initialization error.

0x55	Memory not installed
0x56	Invalid CPU type or Speed
0x57	CPU mismatch
0x58	CPU self test failed or possible CPU cache error
0x59	CPU micro-code is not found or micro-code update is failed
0x5A	Internal CPU error
0x5B	reset PPI is not available
0x5C-0x5F	Reserved for future AMI error codes

**S3 Resume Progress Codes**

0xE0	S3 Resume is started (S3 Resume PPI is called by the DXE IPL)
0xE1	S3 Boot Script execution
0xE2	Video repost
0xE3	OS S3 wake vector call
0xE4-0xE7	Reserved for future AMI progress codes

**S3 Resume Error Codes**

0xE8	S3 Resume Failed
0xE9	S3 Resume PPI not Found
0xEA	S3 Resume Boot Script Error
0xEB	S3 OS Wake Error
0xEC-0xEF	Reserved for future AMI error codes

**Recovery Progress Codes**

0xF0	Recovery condition triggered by firmware (Auto recovery)
0xF1	Recovery condition triggered by user (Forced recovery)
0xF2	Recovery process started
0xF3	Recovery firmware image is found
0xF4	Recovery firmware image is loaded
0xF5-0xF7	Reserved for future AMI progress codes

**Recovery Error Codes**

0xF8	Recovery PPI is not available
------	-------------------------------

0xF9	Recovery capsule is not found
0xFA	Invalid recovery capsule
0xFB – 0xFF	Reserved for future AML error codes

## DXE Phase

Status Code	Description
0x60	DXE Core is started
0x61	NVRAM initialization
0x62	Installation of the South Bridge Runtime Services
0x63	CPU DXE initialization is started
0x64	CPU DXE initialization (CPU module specific)
0x65	CPU DXE initialization (CPU module specific)
0x66	CPU DXE initialization (CPU module specific)
0x67	CPU DXE initialization (CPU module specific)
0x68	PCI host bridge initialization
0x69	North Bridge DXE initialization is started
0x6A	North Bridge DXE SMM initialization is started
0x6B	North Bridge DXE initialization (North Bridge module specific)
0x6C	North Bridge DXE initialization (North Bridge module specific)
0x6D	North Bridge DXE initialization (North Bridge module specific)
0x6E	North Bridge DXE initialization (North Bridge module specific)
0x6F	North Bridge DXE initialization (North Bridge module specific)
0x70	South Bridge DXE initialization is started
0x71	South Bridge DXE SMM initialization is started
0x72	South Bridge devices initialization
0x73	South Bridge DXE Initialization (South Bridge module specific)

## BIOS

---

0x74	South Bridge DXE Initialization (South Bridge module specific)
0x75	South Bridge DXE Initialization (South Bridge module specific)
0x76	South Bridge DXE Initialization (South Bridge module specific)
0x77	South Bridge DXE Initialization (South Bridge module specific)
0x78	ACPI module initialization
0x79	CSM initialization
0x7A – 0x7F	Reserved for future AMI DXE codes
0x80 – 0x8F	OEM DXE initialization codes
0x90	Boot Device Selection (BDS) phase is started
0x91	Driver connecting is started
0x92	PCI Bus initialization is started
0x93	PCI Bus Hot Plug Controller Initialization
0x94	PCI Bus Enumeration
0x95	PCI Bus Request Resources
0x96	PCI Bus Assign Resources
0x97	Console Output devices connect
0x98	Console input devices connect
0x99	Super IO Initialization
0x9A	USB initialization is started
0x9B	USB Reset
0x9C	USB Detect
0x9D	USB Enable
0x9E – 0x9F	Reserved for future AMI codes
0xA0	IDE initialization is started
0xA1	IDE Reset
0xA2	IDE Detect
0xA3	IDE Enable

0xA4	SCSI initialization is started
0xA5	SCSI Reset
0xA6	SCSI Detect
0xA7	SCSI Enable
0xA8	Setup Verifying Password
0xA9	Start of Setup
0xAA	Reserved for ASL (see ASL Status Codes section below)
0xAB	Setup Input Wait
0xAC	Reserved for ASL (see ASL Status Codes section below)
0xAD	Ready To Boot event
0xAE	Legacy Boot event
0xAF	Exit Boot Services event
0xB0	Runtime Set Virtual Address MAP Begin
0xB1	Runtime Set Virtual Address MAP End
0xB2	Legacy Option ROM Initialization
0xB3	System Reset
0xB4	USB hot plug
0xB5	PCI bus hot plug
0xB6	Clean-up of NVRAM
0xB7	Configuration Reset (reset of NVRAM settings)
0xB8 – 0xBF	Reserved for future AMI codes
0xC0 – 0xCF	OEM BDS initialization codes

### **DXE Error Codes**

0xD0	CPU initialization error
0xD1	North Bridge initialization error
0xD2	South Bridge initialization error
0xD3	Some of the Architectural Protocols are not available
0xD4	PCI resource allocation error. Out of Resources
0xD5	No Space for Legacy Option ROM
0xD6	No Console Output Devices are found

## BIOS

---

0xD7	No Console Input Devices are found
0xD8	Invalid password
0xD9	Error loading Boot Option (LoadImage returned error)
0xDA	Boot Option is failed (StartImage returned error)
0xDB	Flash update is failed
0xDC	Reset protocol is not available

## ACPI/ASL Checkpoints

Status Code	Description
0x01	System is entering S1 sleep state
0x02	System is entering S2 sleep state
0x03	System is entering S3 sleep state
0x04	System is entering S4 sleep state
0x05	System is entering S5 sleep state
0x10	System is waking up from the S1 sleep state
0x20	System is waking up from the S2 sleep state
0x30	System is waking up from the S3 sleep state
0x40	System is waking up from the S4 sleep state
0xAC	System has transitioned into ACPI mode. Interrupt controller is in PIC mode.
0xAA	System has transitioned into ACPI mode. Interrupt controller is in APIC mode.

# Appendix

## Appendix A: I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses which also becomes the identity of the device.

The following table lists the I/O port addresses used.

Address	Device Description
0x00000000-0x00000CF7	PCI bus
0x00000000-0x00000CF7	Direct memory access controller
0x00000D00-0x0000FFFF	PCI bus
0x0000F000-0x0000F03F	Video Controller (VGA Compatible)
0x0000F060-0x0000F07F	Ethernet Controller
0x00000A79-0x00000A79	ISAPNP Read Data Port
0x00000279-0x00000279	ISAPNP Read Data Port
0x00000274-0x00000277	ISAPNP Read Data Port
0x00000081-0x00000091	Direct memory access controller
0x00000093-0x0000009F	Direct memory access controller
0x000000C0-0x000000DF	Direct memory access controller
0x00000020-0x00000021	Programmable interrupt controller
0x00000024-0x00000025	Programmable interrupt controller
0x00000028-0x00000029	Programmable interrupt controller
0x0000002C-0x0000002D	Programmable interrupt controller
0x00000030-0x00000031	Programmable interrupt controller
0x00000034-0x00000035	Programmable interrupt controller

## Appendix B: Interrupt Request Lines (IRQ)

Peripheral devices use interrupt request lines to notify CPU for the service required. The following table shows the IRQ used by the devices on board.

Level	Function
IRQ 9	Microsoft ACPI-Compliant System
IRQ 16	PCI standard PCI-to-PCI bridge
IRQ 16	Standard Enhanced PCI to USB Host Controller
IRQ 16	PCI standard PCI-to-PCI bridge
IRQ 11	Video Controller (VGA Compatible)
IRQ 11	PCI PCI Simple Communications Controller
IRQ 5	Ethernet Controller
IRQ 5	SM Bus Controller
IRQ 22	Microsoft UAA Bus Driver for High Definition Audio
IRQ 23	Standard Enhanced PCI to USB Host Controller
IRQ 8	System CMOS/real time clock
IRQ 0	System timer
IRQ 1	Standard 101/102-Key or Microsoft Natural PS/2 Keyboard
IRQ 12	Microsoft PS/2 Mouse
IRQ 4	Communications Port (COM1)
IRQ 3	Communications Port (COM2)
IRQ 13	Numeric data processor
IRQ 19	Standard Dual Channel PCI IDE Controller
IRQ 19	Standard Dual Channel PCI IDE Controller

## Appendix C: BIOS Memory Map

Address	Device Description
0xA0000-0xBFFFF	PCI bus
0xA0000-0xBFFFF	VgaSave
0xD0000-0xD3FFF	PCI bus
0xD4000-0xD7FFF	PCI bus
0xD8000-0xDBFFF	PCI bus
0xDC000-0xDFFFF	PCI bus
0xE0000-0xE3FFF	PCI bus
0xE4000-0xE7FFF	PCI bus
0x7DA00000-0xFEAF7FFF	PCI bus
0x7DA00000-0xFEAF7FFF	Motherboard resources
0xF7800000-0xF7BFFFFF	Video Controller (VGA Compatible)
0xE0000000-0xEFFFFFFF	Video Controller (VGA Compatible)
0xF7C2B000-0xF7C2B00F	PCI Simple Communications Controller
0xF7C00000-0xF7C1FFFF	Ethernet Ethernet Controller
0xF7C28000-0xF7C28FFF	Ethernet Ethernet Controller
0xF7C27000-0xF7C273FF	Standard Enhanced PCI to USB Host Controller
0xF7C20000-0xF7C23FFF	Microsoft UAA Bus Driver for High Definition Audio
0xF7C26000-0xF7C263FF	Standard Enhanced PCI to USB Host Controller
0xFF000000-0xFFFFFFFF	Intel(R) 82802 Firmware Hub Device
0xFF000000-0xFFFFFFFF	Motherboard resources
0xFED00000-0xFED003FF	High Precision Event Timer, HPET
0xF7C25000-0xF7C250FF	SM Bus Controller
0xFED40000-0xFED44FFF	System board
0xFED1C000-0xFED1FFFF	Motherboard resources
0xFED10000-0xFED17FFF	Motherboard resources
0xFED18000-0xFED18FFF	Motherboard resources

---

0xFED19000-0xFED19FFF	Motherboard resources
0xF8000000-0xFBFFFFFF	Motherboard resources
0xFED20000-0xFED3FFFF	Motherboard resources
0xFED90000-0xFED93FFF	Motherboard resources
0xFED45000-0xFED8FFFF	Motherboard resources
0xFEE00000-0xFEEFFFFF	Motherboard resources
0x20000000-0x201FFFFF	System board
0x40000000-0x401FFFFF	System board

## Appendix D: Digital I/O Setting

Below are the source codes written in C, please take them for Digital I/O application examples. The default I/O address is 6Eh.

### C language Code

```

/*                                     */
/*      SMBus Device Register Reader  program by Rex Chin. */
/*                                     */
/*-----  Include Header Area -----*/
#include "math.h"
#include "stdio.h"
#include "dos.h"

/*-----  routing, sub-routing -----*/
void main(int argc, char *argv[])
{
    int SMB_PORT_AD = 0x580;
    int SMB_DEVICE_ADD = 0x6e;    /*75111R's Add=6eh */
    int i,j;

    printf(" Fintek F75111 DIO LED TEST Program Ver:0.1 \n");
    printf(" Warning: This tools is test only. \n");

/*      Index 10, GPIO1x Output pin control      */
    SMB_Byte_WRITE(SMB_PORT_AD,SMB_DEVICE_ADD,0x10,0xff);
    delay(10);

    printf("All Digital I/O LED ON ... \n");
/*      Index 11, GPIO1x Output Data value      */
    SMB_Byte_WRITE(SMB_PORT_AD,SMB_DEVICE_ADD,0x11,0x00);

    delay(3000);

    printf("All Digital I/O LED OFF ... \n");
/*      Index 11, GPIO1x Output Data value      */
    SMB_Byte_WRITE(SMB_PORT_AD,SMB_DEVICE_ADD,0x11,0xff);

    delay(3000);

    printf("Digital I/O pin 7,5,3,1 LED OFF ... \n");
/*      Index 11, GPIO1x Output Data value      */
    SMB_Byte_WRITE(SMB_PORT_AD,SMB_DEVICE_ADD,0x11,0xAA);

```

```
        delay(3000);
        printf("Digital I/O pin 6,4,2,0 LED OFF ...\n");
/*      Index 11, GPIO1x Output Data value      */
        SMB_Byte_WRITE(SMB_PORT_AD,SMB_DEVICE_ADD,0x11,0x55);
        delay(1500);
    }

SMB_Byte_READ(int SMPORT, int DeviceID, int REG_INDEX)
{
    outportb(SMPORT+02, 0x00);    /* clear */
    outportb(SMPORT+00, 0xff);    /* clear */
    delay(10);
    outportb(SMPORT+04, DeviceID);    /* clear */
    outportb(SMPORT+03, REG_INDEX);    /* clear */
    outportb(SMPORT+02, 0x48);    /* read_byte */
    delay(10);
    printf(" %02x ",inportb(SMPORT+05));
}

SMB_Byte_WRITE(int SMPORT, int DeviceID, int REG_INDEX, int REG_DATA)
{
    outportb(SMPORT+02, 0x00);    /* clear */
    outportb(SMPORT+00, 0xff);    /* clear */
    delay(10);
    outportb(SMPORT+04, DeviceID);    /* clear */
    outportb(SMPORT+03, REG_INDEX);    /* clear */
    outportb(SMPORT+05, REG_DATA);    /* read_byte */
    outportb(SMPORT+02, 0x48);    /* read_byte */
/*      delay(10);
    printf(" %02x ",inportb(SMPORT+05)); */
}
```
